

AC busbar grounding

Overview

They are used to establish reliable ground path connections, dissipate lightning strike energy, and prevent the build-up of electrostatic discharge. Special large form-factor straps are also employed in busbar applications for electrical power distribution up to 1000 Amps. An electrical ground bus bar is a conductive bar made from materials like copper or aluminum, and it serves as the central point for connecting multiple grounding conductors in an electrical system. The most popular bonding. Storm Power Components is a leading manufacturer of grounding bus bars and UL Listed ground bar kits, offering one of the largest selections in the industry. With over 90 variations available, you can choose from a wide range of bar sizes, hole patterns, and lug configurations to meet your specific. Busbars distribute electricity with greater flexibility and ease than many other more permanent forms of installation and distribution.
