

Aggregation Switch SPF

Overview

Aggregation switch for small and medium-sized campus networks, with four 10G uplink optical ports for high-speed data transmission; 48 x 1GE SFP ports, providing high-speed network experience for long-distance services. An 8-port, Layer 2 switch made for 10G SFP+ connections. SFP+ stands for "Small Form-Factor Pluggable Plus" and it's a type of hot-pluggable transceiver that supports data rates up to 10 gigabits per second (Gbps). SFP+ modules come in several. An aggregation switch is a network device that consolidates traffic from multiple access switches, wireless access points, or other edge devices and forwards it to core switches or routers. By bundling multiple network connections into a single high-bandwidth link, aggregation switches help. An Aggregation or "Top-of-Rack" switch is designed to connect everything in a rack at high speeds, then have an even bigger pipe out to the rest of the network. The Pro Aggregation does this with it's SFP28 25Gbps ports. It also enables easy expansion by simply adding more fiber or network switches.
