

Cable wiring for cabinets

Overview

High-voltage wiring, such as non-metallic (NM-B or Romex) cable, must be clamped and secured to the cabinet structure, especially where it passes through drilled holes in wooden framing members. Sharp edges must be avoided, and wires should be protected from abrasion to prevent. Running electrical wiring inside kitchen cabinets requires balancing aesthetic goals with strict safety and electrical code requirements. Cabinets are often the only way to route power to modern conveniences without opening walls, making this a common necessity in remodeling and new construction.
