

Can a China Telecom router be used with mobile fiber optic internet

Overview

No, fiber optic internet uses an ONT (Optical Network Terminal) instead of a modem to convert light signals into an internet connection for your router. What router is best for fiber internet?

Look for a Wi-Fi 6 router with Gigabit Ethernet ports and strong processing power. This means you don't need a specialized modem-router device, but your router must support high-speed Ethernet input. These routers are widely available through suppliers on platforms like Alibaba and are engineered to support different network. The fiber cable goes from the router (with antennas) to a small box that only has fiber in and fiber out. To which box should I connect my personal router. Cloud-broadband is the new “innovative” design connectivity from China Telecom by adding a soft router (VCPE) a virtual gateway, a virtual network to the user connectivity.
