

Convert electrical signal to fiber optic patch cord

Overview

Fiber Optic Converters (also known as Media Converters) are devices that convert the electrical signal used in copper wiring such as Ethernet or Serial Data into light waves for transmission over fiber optic cable. They are commonly used in pairs, one at each end of the fiber cable span, enabling. These short fiber optic cords connect transceivers, switches, patch panels, and servers. As data rates increase from 10G → 100G → 400G → 800G, patch cables must handle more bandwidth, more density, and stricter. Our rugged, industrial-grade, point-to-point Fast and Gigabit Ethernet to fiber optic converters work in pairs to extend 10/100/1000M Ethernet signals over long distance. Fiber optic cables offer much higher bandwidth and longer distance capabilities than traditional Ethernet cables, making them an ideal choice for. A fiber media converter serves as a connection device between copper Ethernet devices and fiber optic networks.
