

Dual-mode dual-fiber optical module

Overview

This is a standard SFP+ optical module. It uses two multi-mode optical fibers and the speed rate can up to 10Gbps, transmission distance up to 300m. Single fiber modules (BiDi) use one fiber for both transmitting and receiving data. How do we choose, and what are their differences and advantages?

Let's learn about this! What is a Single-Fiber (BiDi) Transceiver?

Single fiber module also called BiDi transceiver or WDM module. It uses WDM technology to realize the. The secret lies in fiber optic technology, and understanding the basics—1-core, 2-core, Single Mode (SM), and Multi-mode (MM)—is key to mastering this field. This product need to use in pair and match up with fiber converter and optical Ethernet switch with SFP slot, it can be used in Ethernet, telecom and.
