

# Electrical wiring run through conduits and cable trays

## Overview

Historically, wires and cables have been pulled through conduit. Conduit continues to be the mainstay of electrical power distribution. Steel conduit reduces electromagnetic. A cable pathway or raceway is a protective channel or enclosure made of materials like metal or plastic, used to manage and safeguard electrical cables and wires. It serves to organize and shield cables from physical damage, environmental elements, and interference. This can be planned out properly in the beginning. Understanding the types of cable containment systems, including trays, trunks, and conduits, helps engineers and contractors select the best solution for performance, safety, and compliance. From. Some tray cable, with XLPE insulation (cross-linked polyethylene), is sunlight resistant and suitable for installation in free air and hazardous locations - although this goes according to a case-by-case basis.
