

Elevator electrical distribution box heat dissipation

Overview

Heat sinks are commonly installed in drive modules to increase the surface area for heat dissipation, improving efficiency. Fans facilitate airflow to remove heat. The utility model is suitable for the technical field of distribution boxes and provides an elevator distribution box, which comprises a box body, a power supply and a power supply control module, wherein the box body is provided with a plurality of power supply ports; the mounting assembly is. Electrical equipment that distributes power has a heat loss due to the impedance and/or resistance of its conductors. 7-1 provides heat loss in. Heat loss from electrical equipment like switch-gear, transformers and variable frequency drives. Use the following information to calculate input power and temperature rise and determine the heat dissipation rate.
