

# Emergency Communication Tower

## Overview

An emergency communication tower is portable cellular infrastructure designed for rapid deployment when permanent networks are damaged or overwhelmed. The design ensures fast installation and excellent performance, making the STALICO® Communication Tower the ideal solution for situations. I Amplifiers (BDA) or Distributed Antenna Systems (DAS) — is a system installed inside buildings to ensure that emergency responders' radios work reliably throughout the structure. It is ideal for college campuses, open lot parking facilities, medical centers, city streets, shopping malls and any other open space where security is a concern. These portable cellular systems—including COW (Cell on Wheels), SatCOLT, and lattice towers—operate 24-48 hours on integrated generators and meet ANSI/TIA-222. Meet the new Auteldac 6, the latest version of our world leading Zone 1 VoIP telephones. All A6 devices are ATEX and IEC certified for use in zone one or two gas and zone twenty-one and twenty-two dust environments. In addition to standard analog and SIP compatible blue light towers, GAI-TRONICS. There are two (2) 180-foot tall steel towers at the Twin Peaks hilltop site (1 Christmas Tree Point Road) along with a smaller set of antennas on the roof of the main transmission building situated between the towers.
