

Fiber 63 light

Overview

3M™ Light String RMF63 is 6.3mm diameter, flexible, optic fibre with superior uniformity and temperature durability that can be used to create stunning lighting effects in the vehicle. Need help finding the right product for your project?

The newLight FS63 optical temperature sensors are based on the Fiber Bragg Grating Technology (FBG) and designed to accurately retrieve temperature measurements in large structures and machines without interferences from external noise. 5 μm Laser Optimized Fiber provides transmission distances up to 300 m at 850 nm and up to 550 m at 1300 nm. Inserted into each testing conditions. Normally the range of -50% to +100% is considered to have no effect. *Note2 Color variation was determined by the effect of color variation based on the CIE. Multimode fiber optic cable (or glass) is a common specification of optical fiber that offers a much wider core size or core diameter of 50-62.5 microns (μm) compared to the 9 microns (μm) core diameter of single-mode fiber.
