

How many megabits of fiber optic cable are best for a home router

Overview

A large household with multiple 4K streams, gaming, and smart home devices → 200-500 Mbps is recommended. Use the chart below to compare minimum download speed (Mbps) needs for light, moderate and high household use with one, two, three or four devices at a time (such as a laptop, tablet or game console). You can also compare typical online activities with the minimum Mbps needed for adequate. Currently, the Federal Communications Commission (FCC) recommends at least 100 Mbps of download speed, allowing you to check your email, browse the internet and watch a video, but on one device at a time. While 100 Mbps is currently the broadband standard, this speed may be too low to accommodate. Because “bits” of data are very small, speed is usually measured in megabits, or millions of bits, per second (Mbps). Some superfast fiber services can send data at a gigabit per second (Gbps, or a billion bits per second). A gig fiber connection will provide around 1,000 Mbps download and 1,000 Mbps upload—but you won't always see those numbers if you run a speed check on your computer. That bandwidth is shared between all.
