

How much degradation does a 2-meter pigtail fiber optic cable experience

Overview

Based on the test results, there is no degradation in the optical or mechanical performance of the cable. The cable passed all the requirements of both Bellcore specifications (past and present) in Impact Resistance, Compressive Strength, Cable Twist, and Cyclic Flexing. In a perfect vacuum, the silica glass (SiO_2) core does not degrade. Industry Standard Warranty: 20 to 25 Years. Manufacturers like Wolontek design cables to remain within attenuation specs for this period. This depends entirely on installation stress, water. However, like any component, their performance may degrade over time depending on various factors and environmental conditions. You may also want to know: Can A Black Box Be Destroyed?
