

How to adjust the scale on a beam splitter

Overview

Refocus optics by changing z-height (focus on lines) Decide which A-line, overlaps which B-line Is A up or down relative to B ?

Switch OFF pickup tool vacuum before pickup Touchdown tool onto scale A- switch ON vacuum. Raise arm with scale A Check alignment is as before -. Beamsplitters separate incident light into two or more beams of the same wavelength. These exiting beams are differentiated by either their optical power (non-polarizing) or polarization states (polarizing). To make sure that the laser beam hits the same spot for every delay position you have to orientate the incoming beam exactly parallel to the direction of movement of the motorized stage. One input and one output face are coated with a special dielectric coating, while the other faces are uncoated. Specification Product Features 1) Beam scales 2) Rubber non-slip feet 3) A1-10. This tutorial is a detailed, practical guide to using the Optical Glass Cube Dichroic Dispersion Beam Splitter Prism (15×15×15mm, 50:50 split ratio) (Leobot Product #1598).
