

How to connect the long cable for a 1-to-2 optical splitter

Overview

Connect the opposite end of the cable into the single end of the fiber optic cable splitter. This is an. Optical couplers can split or join signals in fibers. These devices work both ways, which helps strong network communication. When employing the first-level splitting method in a residential network, optical splitters offer flexibility for indoor or outdoor installation. Indoor options encompass locations like the community's central computer room, building's weak current well, or floor wiring box. You'll find this type of cable in many home audio systems and TVs. If you have fiber optic cable inside your home, it is possible to install a cable into the home input then split the signal so you can connect the signal to two different television hookups.
