

# How to identify armored optical cables

## Overview

An armored optical cable is a type of fiber optic cable reinforced with a protective layer—usually corrugated steel tape (STA) or steel wires (SWA) —to shield the internal fibers from external threats such as crushing, rodent bites, moisture, and harsh installation conditions. Structural Features. This Cable Jacket Selection Note is intended to provide the reader with an organized selection methodology when selecting the optimum optical cable for a specific application. These cables are designed to endure extreme environmental conditions, physical strain, and potential interference. By adopting the TIA/EIA-598C standard, you gain a universal “language” of colors that speeds identification, reduces miswiring, and enhances safety.
