

Huawei switch access network cable port

Overview

To enable a port on a Huawei switch, start by accessing the device's command-line interface (CLI) via a console cable or SSH. Use the system-view command to enter configuration mode, then navigate to the target port using interface GigabitEthernet 0/0/1 (replace with your port ID). Execute. This document describes all the configuration commands of the device, including the command function, syntax, parameters, views, default level, usage guidelines, examples, and related commands. For example: Replace USERNAME with the new username, set the password, define service-type (telnet, ssh, etc. Traffic is both received and sent in native formats with no VLAN tagging whatsoever. Anything arriving on an access port is simply assumed to. In this tutorial, we will guide you through the process of configuring access and trunk ports on Huawei Switches.
