

# Internal Material of Fiber Optic Patch Cords

## Overview

A fiber-optic patch cord is constructed from a core with a high refractive index, surrounded by a coating with a low refractive index, that is strengthened by aramid yarns and surrounded by a protective jacket. As networks move to higher speeds and higher density, choosing the right fiber optic patch cords becomes critical to the reliability of your system. At ZION Communication, we design and manufacture a full range of fiber patch cords for: This guide will help you quickly understand the main types of. A fiber-optic patch cord is a fiber-optic cable capped at each end with connectors that allow it to be rapidly and conveniently connected to telecommunication equipment. This is known as interconnect-style cabling. Ideally, your finished fiber optic cable assembly will meet all relevant international. OFNR (Riser) rated jacket with Kevlar yarn, and are factory terminated resulting in uncompromised performance. GT-SCSCDM4A-xM fiber optic patch cords are ideal for short distance patching. MPO (Multi-fiber Push-On) fiber optic patch cords are a crucial component in modern data centers and high-density fiber optic networks.

### Fiber-optic patch cord

A fiber-optic patch cord is constructed from a core with a high refractive index, surrounded by a coating with a low refractive index, that is strengthened by aramid yarns and surrounded by a protective jacket. Transparency of the core permits transmission of optic signals with little loss over great distances. The coating's lower refractive index causes light to be reflected back toward the core, minimizing signal loss. The protective aramid yarns and outer jacket minimize physical damage to the core and coating.
