

Introduction to Optical Cable Strippers

Overview

At its core, an optical fiber stripper is a specialized tool engineered to precisely remove the protective polymer coatings from an optical fiber without damaging the delicate glass core and cladding beneath. CFS-2 fiber cable cutting scissors are used to strip 125m optical fiber and 250m. Optical fibers are typically protected with fiber coatings made from polymers such as acrylate, silicone or polyimide. In an industry where precision is not just a goal but a requirement, the quality of your stripping tool directly impacts signal integrity, network reliability, and overall. Mechanical fiber strippers for Large Diameter Fibers (LDF) for removing various coating materials from windows and fiber ends. One is the use of connectors that join two fibers to form a temporary joint.
