

Is it easy to use a mobile pole for laying fiber optic cables

Overview

Installing cables is not an easy thing, especially for aerial cable installations. Extra concentration and patience are needed during the fiber optic installation. The actual situation is usually much more complex than we talked about right here. Installing cables is not an easy thing, especially for aerial cable installations. Extra concentration and patience are needed during the fiber optic installation. The actual situation is usually much more complex than we talked about right here. You need to adjust your plans according to real conditions. When you are balancing up high, you need to make sure everything is in perfect working order. That is why aerial installation requires a ton of different tools to make the job in the sky easy as can be! Some of the common tools include aerial storage for cables; telescoping poles; fiber heat shrink tube; brackets; blocks; cable saddles; fiber suspe. To ensure a smooth fiber optic installation process, it is essential to complete the following preparation tasks before commencing work:

1. Pre-Survey: This involves planning the cable route, which will determine the method of aerial cable installation to be used, as well as the necessary equipment and materials. 2. Installation Issues: Investigati. 1. The distance between poles of overhead lines is 25- -40 meters in the urban area, 40-50 meters in the suburbs, and no more than 67 meters in other sections. 2. Overhead fiber optic cable should adopt a galvanized steel strand with the specification of 7/2.2mm as the suspension wire. For armored fiber optic cable, a steel strand with 7/2.0mm or /. There are two methods to install overhead fiber optic cables: the moving reel method and the stationary reel method. 1. Moving reel installation method: It is normally adopted when a cable reel trailer or aerial lift truck can be moved along the pole line and there are no obstructions to prevent raising the cable. It is a one-pass operation without.
