

KVM switcher displays no signal

Overview

Problem 3: The KVM switch is on but nothing shows on the display or it shows “no signal”. Solution: First, check if the input source is powered on, and ensure that you have switched to the corresponding channel where the input source is connected. In single monitor setups, display issues like “KVM not detecting second monitor” can occur due to incorrect connections or incompatible. I have a display port KVM switch I'm using to share one monitor with a Windows system and another with a macbook air. An issue I keep having is that when I switch between systems I often get a "no signal - DP not found" message and a black screen. I have a Laptop that is also connected to the. Please ensure the length and specifications of the USB/HDMI/VGA/DisplayPort cables meet the product requirements, the cables are securely connected to the product and device, and the devices connected to the input and output ports of the product are not reversed. Weirdly enough the User's Manual doesn't actually contain.
