

Long-distance optical transceiver QSFP

Overview

A QSFP 40G 80km transceiver is a long-reach 40Gbps optical module designed to transmit data up to 80km over single-mode fiber, typically based on extended-reach 40G ZR4 or enhanced ER4 optical architectures. It provides an ideal solution for large-scale data centers for high-demand. The QSFP-100G modules are our latest generation of 100G transceiver modules solution based on a QSFP form factor. ● Interoperable with other IEEE-compliant 100GBASE interfaces where. QSFP stands for Quad Small Form-factor Pluggable. By integrating four-lane signals into a single module, it supports four times the data throughput of the SFP while maintaining a slightly larger size. Simply put, 1x QSFP Speed = 4x SFP Total Speed The typical QSFP+ vs SFP+ appearance The initial. QSFP 40G 80km transceivers are designed for long-distance 40Gbps links where standard LR4 (10km) or ER4 (40km) optics cannot meet reach requirements. These transceivers are compliant with QSFP+ MSA and IEEE. At Pivotal Optics, we deliver transceiver solutions you can count on— precision-built, MSA-compliant, and performance-driven. Each transceiver undergoes rigorous testing and comes.
