

# Long-distance switches and PoE switches

## Overview

These Power over Ethernet (PoE) switches are specialized networking devices that extend the reach of data and power transmission far beyond the typical 100-meter limitation of standard Ethernet cables. They can transmit power and data to distances up to and in some cases exceeding 200 meters. We understand your challenges when expanding your network reach —across a large campus or connecting multiple buildings. Port-based VLAN and Loop Protection features. The Edimax Long Range PoE+ Series Switch features. This guide will navigate the key considerations for selecting the right switch and highlight how Velolan Networks provides reliable, innovative solutions for 150m and even 250m deployments. 3af/at/bt standards define PoE operation over distances up to 100 meters using standard Ethernet. 800M 8 Port Long Range PoE+ Switch is economic and convenient way to transmit stable network and sufficient electrical power for IP devices feature long distance deployment. It equips with 8\*10/100Mbps PoE RJ45 ports and two 10/100Mbps uplink ports, providing power and network for up to 8 IP.
