

Maintenance and Fiber Optic Cutting

Overview

Conduct routine inspections and maintenance to identify and address potential issues before they lead to fiber cuts. Inspect aerial or underground routes for signs of degradation, such as exposed cables or unstable support structures. However, you don't need to panic! It can still be fixed. Accidental cuts, breaks, or other damage can disrupt your network and cause costly downtime. With the right tools and techniques, you can efficiently repair damaged fiber cables and restore. Fiber optic cable cuts can be alarming, especially with problems like signals being dropped, internet interruptions, or even network failures. Purpose-built Fiber Optic Cutters, part of the broader category of Fiber Optic Tools, give you clean, repeatable cuts on jackets, strength members, and buffer tubes—so. Some people have suggested that fiber optic networks need periodic maintenance, including microscopic inspection of connectors and mating adapters and even insertion loss testing or taking OTDR traces.
