

One-to-two optical splitter machine

Overview

A fiber optic splitter 1×2 is a passive optical device that takes a single input signal and divides it into two output signals. These splitters are widely used in point-to-multipoint configurations such as Fiber to the Home (FTTH), data centers, and enterprise LANs. These narrowband couplers feature center wavelengths of 980, 1064, or 1550nm with coupling ratios of 50:50, 75:25, 90:10, or 99:1. 1x2. Check each product page for other buying options.
