

Optical Module SRV

Overview

Feature highlights: The SFP-10G-SRV optical module supports 10Gbps data links up to 80km on single-mode fiber, featuring a duplex LC connector, hot-pluggable SFP+ design, and RoHS compliance for environmental safety. As an essential component of optical fiber communication, optical modules are optoelectronic devices that facilitate the conversion between optical and electrical signals during the transmission process. Optical modules typically have an electrical interface on the side that connects to the inside of the system and an optical interface on the side that connects to the outside. This 02310STB is 100% genuine Huawei product. It won't have any compatibility problem with your Huawei devices. And the Huawei Optical Transceiver, SFP+, 10G, Multi-mode Module (850nm, 0. This upgrade could totally change how high-capacity networks handle speed, scale, resilience, and security.

Users of Optical Modules

An optical module is a typically hot-pluggable optical transceiver used in high-bandwidth data communications applications. Optical modules typically have an electrical interface on the side that connects to the inside of the system and an optical interface on the side that connects to the outside world through a fiber optic cable. The form factor and electrical interface are often specified by an interested group using a multi-source agreement (MSA). Optical modules can either plug into a front panel or be mounted on a printed circuit board (PCB).

MRV SRV LD supervisory module, SRV LD supervisory module

The EM800-SRV Supervisory module is part of the Fiber Driver-LD (LambdaDriver®) product line and can be hosted by the LambdaDriver chassis. It is a 1-slot module that integrates the management and control functions of the transceiver.
