

# Quick Fiber Optic Communication Testing

---

## Overview

This is your "QuickStart" guide to testing fiber optic cable plants, patchcords and communications equipment with a fiber optic light source and power meter. We'll give you the basic information you need and provide some printable references. Fiber optic cable is a type of cabling that contains one or more optical fibers for transmitting data at high speeds and/or over long distances using light. These fibers are most commonly made of glass and are very thin, typically less than a tenth of the width of a human hair. References to FOA "1. The transmitter usually incorporates a Light Emitting Diode (LED) which converts digital binary data into light waves. Coders and decoders are interfaced when needed. Why. Fiber isn't without limitations. If you're connecting an access point via fiber, you'll need a. We'll explain why it's vital to test fiber optic cables, the three most popular methods, and when you should use them.
