

S5720 Core Switch Stacking Configuration

Overview

All S5720EI switches support stacking. "Campus Networks Typical Configuration Examples" provides typical campus network networking modes and a variety of deployment examples. PS□ S5720 stacking can be based on electrical ports or optical ports. This test is. Huawei S Series Switches Stack Guide—Version and Model Requirements 22 Oct, 2025. Posted by:XPONSHOP As we know, switch stacking deployment has some special requirement or limitation, this blog will share the software version and model requirement in detail on Huawei S Series Switches stack. Switch stacking is the process of combining multiple switches into a logical device that participates in data forwarding as a whole, in order to expand the number of ports, simplify networking, increase reliability, and extend the system's processing power and bandwidth. Moduletek Labs takes Huawei. Why Does the S5700 Fail to Restrict User Access Through a Traffic Policy (V200) What is TACACS and How to Configure TACACS?

S5720-HI Service Port Stacking Support

For stacking-supported service ports, some of them can be used as stack ports, whereas some can be used as ordinary service ports. Since V200R011C10, S5720-HI series switches can set up stacks in

Stack Setup

Member switches can be connected to form a stack using stack cards or service ports. For details about the two stack connection methods, see Stack Connection Modes.

S5720-SI Series Standard Gigabit Ethernet Switches

The templates are configured on core devices and automatically delivered to access devices, enabling centralized control, simplified service configuration, and flexible configuration modification.

Huawei S5720 exchange stack configuration method and note matters

After stacking, the configuration of other switches outside the main switch (such as port configuration) will be lost. After stacking is successful, the main switch is re-configured on the main switch

S5720-LI Series Simplified Gigabit Ethernet Switches

After a stack is set up, multiple physical switches are virtualized into a single logical device. You can log in to any member switch in the stack to manage all the member switches in the stack.
