

Should I use a 100Mbps or gigabit router for a 100Mbps fiber optic connection

Overview

In fact, when you are using 100M broadband, changing to a gigabit router can not increase the speed of the wired network, but it can increase the speed of the wireless network. Whether the network speed can be improved depends on whether the router is the bottleneck of the. 10/100 Ethernet, commonly referred to as Fast Ethernet, is a networking standard that supports two distinct data transfer speeds: 10 megabits per second (Mbps) and 100 Mbps. This issue has also been discussed among COBTel 's engineers before. In our home LAN, the transmission medium is typically 100Mbps network. Gigabit internet and faster is best for running a public web server, transferring large files to and from a remote network, or livestreaming gameplay to Twitch. But knowing the jargon will steer you toward the right internet plan.
