Overview

QSFP-40G-SR-BD (also known as QSFP BiDi, Bidirectional) is a short distance multi-mode fiber optic transmission 40GBASE SR BiDi transceiver. Its biggest feature is the use of dual fiber bidirectional (BiDi) technology, which does not require the replacement of existing duplex wiring. Data center traffic continues to grow, driven by increases in server activity, application density on virtualized servers, and demand for low-latency east-west connections between servers. NADDOD has a full range of professional testing equipments for testing various parameters of products to ensure high performance and quality of optical. QSFP-40G-SR-BD is a 40G QSFP+ BiDi transceiver designed for short-reach connectivity over duplex multimode fiber using LC connectors. Only a pair of. This optical module supports 1-to-4 splitting. This transceiver is compliant with QSFP+ MSA and IEEE 802. Digital diagnostics functions are also available via.
