

Spacing between electrical box sockets

Overview

The maximum spacing between receptacles, according to the National Electric Code, has been set at 12-feet since 1956--with no point along a wall being more than 6-feet from a receptacle. Minimum distance between two 2-gang sockets?

If locating two 2-gang electrical sockets on a stud wall (one above the other), is there any requirement which means that a minimum distance should be maintained them?

Or can the two faceplates be located tight up to each other?

Thanks. They can be. All plugs and socket outlets must be 3-pin type. Appliances requiring more than 16A must be controlled by a double-pole switch. Participants explore specifications, compliance, and differences in electrical installation. It should be 86mm distance of between two electrical back boxes installed. When designing a circuit board, it's essential to refer to these spacing. The plan is to use 35mm metal back boxes screwed to the wall, so in perfect 40mm depths behind that should produce a small 5mm gap between the socket fronts and back boxes, but in greater 50mm depths behind there will be more of a 15mm gap between the socket fronts and back boxes.
