

Testing machine for pigtails

Overview

Testing pigtails with a multimeter is a fundamental skill for anyone working with electrical systems. The continuity test quickly identifies broken wires, while the resistance test provides a more detailed assessment of the pigtail's condition. This comprehensive guide will equip you with the knowledge and skills to accurately assess the integrity of a pigtail, helping you identify issues. This is a completion of a fully automated test station for testing MOST150 Pigtails - the latest generation which is available on the market at the moment. All components required for testing were developed by us. Shop products from small business brands sold in Amazon's store. Learn more Need help?

The facility is used for bending fatigue tests according to DIN 51211 and ISO 7801 on wires with diameters of 0. The wire samples are bent with a 90° angle to the left and to the right. Mefiberoptic offers a range of return loss and insertion loss test equipment in single channel, multichannel and bi-directional configurations To Check the finished patch cable insertion loss and Return Loss in patch cord and pigtail production line.
