

What materials are used in hybrid optical and electrical cables

Overview

A hybrid cable combines two transmission media: Optical fibers for data, typically single-mode or multimode. Copper power conductors, usually low-voltage DC to supply the kind of device used in remote radios or IP cameras. This is different from a composite cable, where many. This document provides detailed recommendations for optical/metallic hybrid cables used in communication systems, addressing their construction, characteristics, and applications. On campus networks, hybrid cables are typically used to connect access switches and WLAN APs, so that the access switches can supply PoE power to the APs. In telecommunications, fiber optic cables, twisted pair cables, and coaxial cables are commonly known to people for their wide usage.
