

What to do if cable trays are dragged

Overview

Improper Support and Fixing: Insufficient or loose brackets, hangers or supports may allow trays to vibrate or shift, risking cable damage. Adhere strictly to load tables and support spacing recommended by manufacturers. Whether installed as stainless steel cable trays, these components offer durable and flexible solutions for routing cables safely. These trays are typically made from steel, aluminium, or fibreglass, providing durability while allowing installation flexibility. Any debris or foreign material should be removed from the tray and its supports. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned in this technical guide only apply to our own cable management ranges and cannot under any circumstances be transposed to si osure, overheating or.
